

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

##### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

##### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/05/2017	Source: EPA
Date Data Arrived at EDR: 04/21/2017	Telephone: N/A
Date Made Active in Reports: 05/12/2017	Last EDR Contact: 07/07/2017
Number of Days to Update: 21	Next Scheduled EDR Contact: 10/16/2017
	Data Release Frequency: Quarterly

##### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal Delisted NPL site list***

### Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/05/2017	Source: EPA
Date Data Arrived at EDR: 04/21/2017	Telephone: N/A
Date Made Active in Reports: 05/12/2017	Last EDR Contact: 07/07/2017
Number of Days to Update: 21	Next Scheduled EDR Contact: 10/16/2017
	Data Release Frequency: Quarterly

## ***Federal CERCLIS list***

### FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 07/07/2017
Number of Days to Update: 92	Next Scheduled EDR Contact: 10/16/2017
	Data Release Frequency: Varies

### SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/07/2017	Source: EPA
Date Data Arrived at EDR: 04/19/2017	Telephone: 800-424-9346
Date Made Active in Reports: 05/05/2017	Last EDR Contact: 07/21/2017
Number of Days to Update: 16	Next Scheduled EDR Contact: 10/30/2017
	Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

### SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 02/07/2017	Source: EPA
Date Data Arrived at EDR: 04/19/2017	Telephone: 800-424-9346
Date Made Active in Reports: 05/05/2017	Last EDR Contact: 06/08/2017
Number of Days to Update: 16	Next Scheduled EDR Contact: 07/31/2017
	Data Release Frequency: Quarterly

## ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 12/12/2016	Source: EPA
Date Data Arrived at EDR: 12/28/2016	Telephone: 800-424-9346
Date Made Active in Reports: 02/10/2017	Last EDR Contact: 06/29/2017
Number of Days to Update: 44	Next Scheduled EDR Contact: 10/09/2017
	Data Release Frequency: Quarterly

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/12/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/28/2016	Telephone: (415) 495-8895
Date Made Active in Reports: 02/10/2017	Last EDR Contact: 06/29/2017
Number of Days to Update: 44	Next Scheduled EDR Contact: 10/09/2017
	Data Release Frequency: Quarterly

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/12/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/28/2016	Telephone: (415) 495-8895
Date Made Active in Reports: 02/10/2017	Last EDR Contact: 06/29/2017
Number of Days to Update: 44	Next Scheduled EDR Contact: 10/09/2017
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/12/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/28/2016	Telephone: (415) 495-8895
Date Made Active in Reports: 02/10/2017	Last EDR Contact: 06/29/2017
Number of Days to Update: 44	Next Scheduled EDR Contact: 10/09/2017
	Data Release Frequency: Quarterly

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/12/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/28/2016	Telephone: (415) 495-8895
Date Made Active in Reports: 02/10/2017	Last EDR Contact: 06/29/2017
Number of Days to Update: 44	Next Scheduled EDR Contact: 10/09/2017
	Data Release Frequency: Varies

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 12/28/2016	Source: Department of the Navy
Date Data Arrived at EDR: 01/04/2017	Telephone: 843-820-7326
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 05/15/2017
Number of Days to Update: 93	Next Scheduled EDR Contact: 08/28/2017
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 02/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/28/2017	Telephone: 703-603-0695
Date Made Active in Reports: 06/09/2017	Last EDR Contact: 05/31/2017
Number of Days to Update: 101	Next Scheduled EDR Contact: 09/11/2017
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 02/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/28/2017	Telephone: 703-603-0695
Date Made Active in Reports: 06/09/2017	Last EDR Contact: 05/31/2017
Number of Days to Update: 101	Next Scheduled EDR Contact: 09/11/2017
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/26/2016

Date Data Arrived at EDR: 09/29/2016

Date Made Active in Reports: 11/11/2016

Number of Days to Update: 43

Source: National Response Center, United States Coast Guard

Telephone: 202-267-2180

Last EDR Contact: 06/28/2017

Next Scheduled EDR Contact: 10/09/2017

Data Release Frequency: Annually

## ***State- and tribal - equivalent NPL***

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity.

These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 01/30/2017

Date Data Arrived at EDR: 01/31/2017

Date Made Active in Reports: 05/23/2017

Number of Days to Update: 112

Source: Department of Toxic Substances Control

Telephone: 916-323-3400

Last EDR Contact: 05/02/2017

Next Scheduled EDR Contact: 08/14/2017

Data Release Frequency: Quarterly

## ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 01/30/2017

Date Data Arrived at EDR: 01/31/2017

Date Made Active in Reports: 05/23/2017

Number of Days to Update: 112

Data Release Frequency: Varies

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 03/02/2017

Next Scheduled EDR Contact: 04/27/2009  
Data Release Frequency: No Update Planned

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### DEED: Deed Restriction Listing

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 06/06/2012	Source: FirstSearch
Date Data Arrived at EDR: 01/03/2013	Telephone: N/A
Date Made Active in Reports: 02/22/2013	Last EDR Contact: 01/03/2013
Number of Days to Update: 50	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 12/12/2016	Source: Environmental Protection Agency

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008

Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2015	Source: California Environmental Protection Agency

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

#### EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## **GEOCHECK<sup>®</sup> - PHYSICAL SETTING SOURCE ADDENDUM**

### **TARGET PROPERTY ADDRESS**

OCTA-TSOC  
W LINCOLN AVENUE  
ANAHEIM, CA 92802

### **TARGET PROPERTY COORDINATES**

Latitude (North):	33.831945 - 33° 49' 55.00"
Longitude (West):	117.934435 - 117° 56' 3.97"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	413534.0
UTM Y (Meters):	3743721.2
Elevation:	136 ft. above sea level

### **USGS TOPOGRAPHIC MAP**

Target Property Map:	5641294 ANAHEIM, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

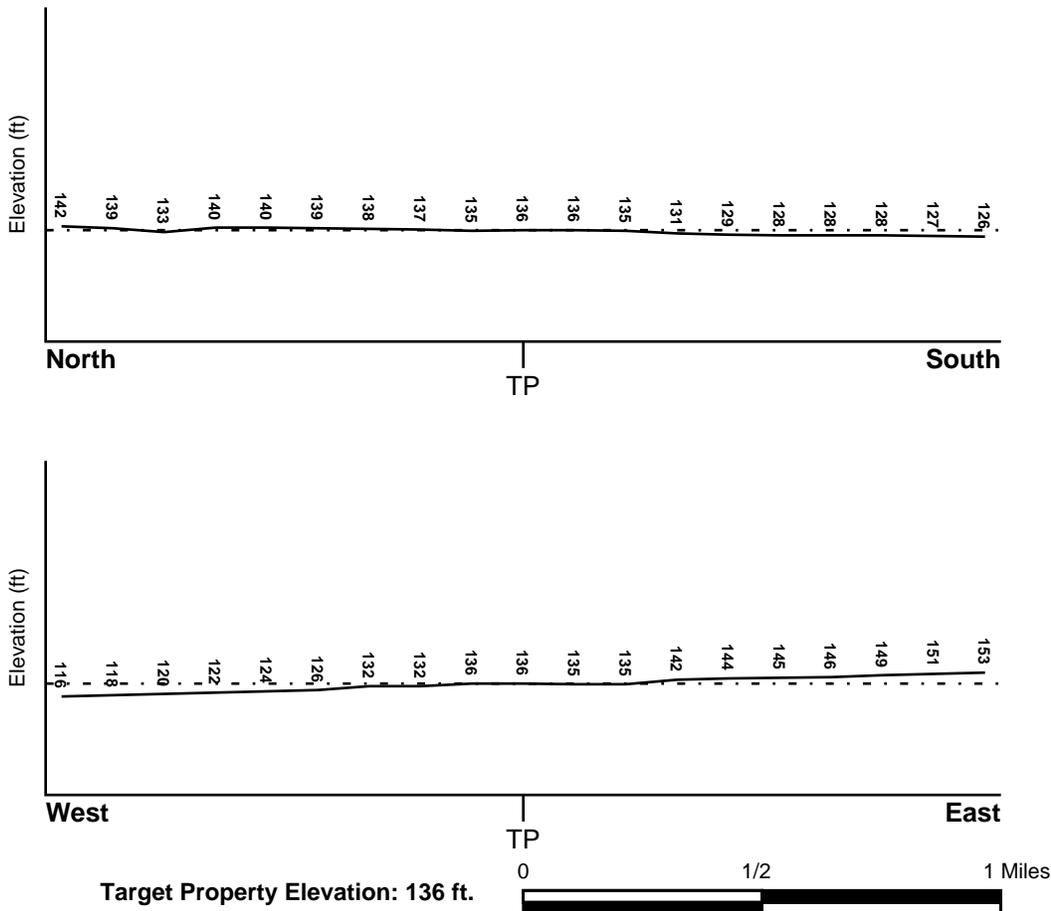

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06059C0133J	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06059C0127J	FEMA FIRM Flood data
06059C0131J	FEMA FIRM Flood data
06059C0129J	FEMA FIRM Flood data

## NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
ANAHEIM	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### *Site-Specific Hydrogeological Data\*:*

Search Radius:	1.25 miles
Status:	Not found

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: SAN EMIGDIO

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	7 inches	61 inches	stratified gravelly loamy coarse sand to very fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.9

### Soil Map ID: 2

Soil Component Name: HUENEME

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	27 inches	fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.4
2	27 inches	59 inches	stratified sand to silt loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.4

### Soil Map ID: 3

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
2	16 inches	62 inches	stratified sand to fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

**Soil Map ID: 4**

Soil Component Name: SAN EMIGDIO

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	7 inches	40 inches	stratified gravelly loamy coarse sand to very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 14	Max: 8.4 Min: 7.9

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
3	40 inches	44 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
4	44 inches	61 inches	stratified gravelly loamy coarse sand to very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 42 Min: 14	Max: 8.4 Min: 7.9

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

Radon Database for California

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

### OTHER

Airport Landing Facilities: Private and public use landing facilities  
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater  
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Rincon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

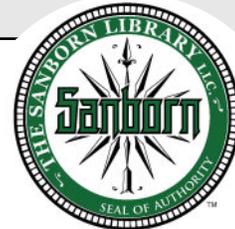

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

**Subject: Phase II Environmental Site Assessment  
OCTA-TSOC, Lincoln Avenue Site, Anaheim, California**

Dear Mr. Fierce:

This report presents the findings of a Phase II Environmental Site Assessment (ESA) completed by Rincon Consultants, Inc. for the proposed Orange County Transportation Authority Transit Security & Operations Center (OCTA-TSOC) Lincoln Avenue project site located south of W Lincoln Avenue and west of S Manchester Avenue in Anaheim, California. The Phase II ESA was performed for STV Incorporated on behalf of OCTA by Rincon Consultants, Inc. The work was conducted based on the findings of our Draft Phase I ESA, dated August 28, 2017, which identified recognized environmental conditions (RECs) in connection with the project site. This Phase II ESA includes the results of soil matrix and soil vapor sampling conducted at the project site.

Thank you for selecting Rincon for this project. If you have any questions, or if we can be of any future assistance, please contact us.

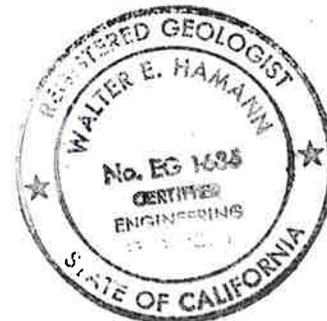

Sincerely,  
**RINCON CONSULTANTS, INC.**

# 1 Executive Summary

---

This report presents the results of a Phase II Environmental Site Assessment (ESA) for the proposed Orange County Transportation Authority Transit Security & Operations Center (OCTA-TSOC) Lincoln Avenue project site located south of W Lincoln Avenue and west of S Manchester Avenue in Anaheim, California (Figure 1, Vicinity Map). The Phase II ESA was performed for STV Incorporated (STV) on behalf of OCTA by Rincon Consultants, Inc. (Rincon). The work was conducted based on the findings of our previous Draft Phase I ESA, dated August 28, 2017, which identified the following recognized environmental conditions (RECs) in connection with the project site:

## Recognized Environmental Conditions (RECs)

- Historical and existing project site land uses including a former gasoline tank and existing inground hydraulic lifts and parts washers, and previously identified total petroleum hydrocarbon (TPH)-impacted soil on the project site

## Potential Recognized Environmental Conditions

- Adjacent automotive repair facilities, former adjacent gasoline service stations and adjacent gas transmission and hazardous liquid pipeline
- Western adjacent railroad tracks

To evaluate the project site impact associated with the identified REC and potential RECs, Rincon recommended conducting a soil matrix/soil vapor assessment at the project site. The following summarizes the soil matrix and soil vapor sampling that was conducted as part of this Phase II ESA.

On August 31, 2017, Rincon mobilized to the project site to advance a total of 24 borings. In twelve of the borings, soil vapor samples were collected at a depth of 5 feet below ground surface (bgs) and analyzed for volatile organic compounds (VOCs) and methane. In the remaining 13 borings, one collocated with a soil vapor sample, soil samples were collected at various depths and analyzed for one or more of the following: organochlorine pesticides (OCPs), herbicides, VOCs, metals, TPH, and polychlorinated biphenyls (PCBs).

Concentrations of TPH, VOCs, PCBs, herbicides, OCPs, and metals in soil were not detected above the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Environmental Screening Levels (ESLs) for residential soil. Although two concentrations of zinc exceeded the typical range of background concentrations established by the Kearny Foundation (1996), they did not exceed the respective ESL.

Trichloroethylene (TCE) was detected in two of the thirteen soil vapor samples analyzed (including one duplicate sample), ranging from 0.18 micrograms per liter ( $\mu\text{g/L}$ ) to 1.09  $\mu\text{g/L}$ . However, the concentrations of TCE detected were below the commercial/industrial ESL of 3.0  $\mu\text{g/L}$ . Methane was detected in three of the soil vapor samples analyzed, ranging from 5.45  $\mu\text{g/L}$  to 162.35  $\mu\text{g/L}$  (8.31 parts per million by volume [ppmv] to 247.47 ppmv). According to the Department of Toxic Substances Control (DTSC) Advisory on Methane Assessment and Common Remedies at School Sites dated June 16, 2005, a methane detection of 1,000 ppmv is considered a cautionary value at which a further methane investigation would be recommended. The detected concentrations of methane do not exceed the cautionary value determined by the DTSC.

During the current Phase II ESA assessment, none of the concentrations of constituents detected in the soil or soil vapor samples exceeded their respective commercial / industrial ESLs.

Based on the proposed commercial/ industrial use of the site and the fact that the detected concentrations of constituents do not exceed the commercial/industrial screening levels, no further assessment is recommended.

However, based on the previous assessments that were conducted at the project site from 1993 through 2004, hydrocarbon and lead-impacted soil were previously identified at numerous locations at 1512-1520 W Lincoln Avenue. The majority of the impacted soil was identified in the southern portion of the property at 1514 and 1516 W Lincoln Avenue to 10 feet below ground surface. Based on the findings of the previous assessments and the results of the current assessment, we recommend that a soil management plan be prepared that addresses issues associated with the impacted soils that will be encountered during future site excavation/ grading activities. Impacted soils will require special handling and should be removed in accordance with local environmental health regulations and requirements.

## 2 Introduction

---

This report presents the results of a Phase II Environmental Site Assessment (ESA) conducted at the proposed Orange County Transportation Authority Transit Security & Operations Center (OCTA-TSOC) Lincoln Avenue project site located south of W Lincoln Avenue and west of S Manchester Avenue in Anaheim, California (Figure 1, Vicinity Map). The Phase II ESA was performed for STV Incorporated (STV) on behalf of OCTA by Rincon Consultants, Inc. (Rincon). The work was conducted based on the findings of our Draft Phase I ESA, dated August 28, 2017.

### 2.1 Project History

The following documents regarding the project history were provided by OCTA:

- *Phase I and II Environmental Site Assessment Report, Assessor Parcel Numbers 250-122-03, 250-122-04, 250-122-05, 250-122-06, 250-122-07, 250-111-01, and 250-111-02, City of Anaheim, Orange County, California* prepared by Leighton Consulting, Inc. and dated December 31, 2004 – Leighton Consulting, Inc. (Leighton) reviewed a 1993 subsurface investigation report conducted for the project site (by Leighton) during their 2004 Phase I ESA. The 1993 subsurface investigation was summarized by Leighton as follows:
  - Leighton advanced 14 hollow-stem auger borings within and adjacent to the former Econo Lube N' Tune #45 building and the existing automotive buildings on the project site. The results of the investigation showed polychlorinated biphenyls (PCBs) and halogenated volatile organic compounds (HVOCs) by EPA method 8010 and VOCs by EPA method 8240 were not detected, except for one soil sample collected inside the 1514 West Lincoln Avenue automotive shop, which contained 46 micrograms per kilogram ( $\mu\text{g}/\text{kg}$ ) trichloroethylene (TCE) at a depth of 5 feet below grade. Total recoverable petroleum hydrocarbons (TRPH) by EPA method 418.1 were detected in 44 of the 86 soil samples with concentrations ranging between 8 and 10,100 milligrams per kilogram ( $\text{mg}/\text{kg}$ ). The samples

with TRPH concentrations above 1,000 mg/kg were located at the southern end of the automobile repair shops facility. Four soil samples were detected with lead concentrations greater than ten times the Soluble Threshold Limit Concentration (STLC). These samples were then analyzed for the Waste Extraction Test (WET). One of these samples (collected from the 1516 West Lincoln Avenue auto shop) was detected with a concentration of 7.35 milligrams per liter (mg/L), which is above the STLC of 5 mg/L and is considered a hazardous waste under California Title 22 regulations.

In the 2004 report, Leighton also summarized a subsurface investigation that was conducted by Woodward Clyde in 1997. The 1997 subsurface investigation was summarized by Leighton as follows:

- Woodward Clyde advanced four direct-push borings, each to a depth of 10 feet, along the eastern edge of the automotive repair facility to assess the lateral extent of petroleum impacted soils previously documented by Leighton in 1993. Petroleum hydrocarbons were reportedly not detected in the 16 soil samples that were submitted for analysis as part of the Woodward Clyde investigation.

Based on their review and their 2004 Phase I ESA findings, Leighton recommended that a remedial investigation be conducted to assess the lateral extent of hydrocarbon and lead-impacted soil identified on the southern portion of the property. In addition, on December 17, 2004, Leighton advanced nine soil borings in the area of previously identified hydrocarbon and lead-impacted soil. Total petroleum hydrocarbons (TPH) were detected in 2 of the 36 samples analyzed, ranging from 2,200 mg/kg to 2,400 mg/kg. Volatile organic compounds (VOCs) were not detected in any of the soil samples analyzed. This report identified the following concerns in connection with the project site:

- Possible presence of lead-based paint and asbestos-containing building materials in the onsite structure
- The presence of underground hydraulic lifts within the onsite structure
- Previously identified hydrocarbon and lead-impacted soil at numerous locations at 1512-1520 W Lincoln Avenue. The majority of the impacted soil was identified in the southern portion of the property at 1514 and 1516 W Lincoln Avenue to 10 feet below ground surface (bgs)
- Piles of unidentified debris in the northwest portion of the project site

Leighton recommended the following:

- Prior to demolition of the onsite structures, an asbestos and lead-paint survey should be completed. Based on the results of the survey, materials should be properly disposed.
- Following demolition of the onsite structures, the area of impacted soil and the removal of the onsite hydraulic lifts should be mitigated in accordance with regulatory agency requirements.
- The debris piles should be removed in accordance with regulatory guidelines.

*Report of Phase I Environmental Site Assessment, OCTA Excess Land Property, 1510-1520 West Lincoln Avenue, Anaheim, California* prepared by AMEC Environment & Infrastructure, Inc. (AMEC) and dated February 22, 2012 – Based on their own assessment and review of the 2004 Phase I and II conducted by Leighton, AMEC identified the former uses of the project site as tractor repairing/painting, automotive repair, and a former “gas tank.” AMEC recommended the following:

- Prepare a soil management plan that addresses issues associated with the impacted soils that will be encountered during future site excavation/ grading activities. Impacted soils will require special handling and should be removed in accordance with local environmental health regulations and requirements.
- Remove the inground hydraulic lifts and impacted surrounding soil
- Additional investigation could be conducted on other portions of the project site to address onsite and adjacent historical uses, specifically focusing on the northern portion of the property, in the area of the former “gas tank,” tractor/automobile repair buildings and adjacent gasoline service station
- Conduct an asbestos and lead-based paint survey to identify the locations of asbestos-containing building materials and lead-based paint surfaces

Rincon completed a Phase I ESA for the project site (draft report dated August 28, 2017). Based on the findings of the Phase I ESA, the following Recognized Environmental Condition (REC) and potential RECs were identified:

### **Recognized Environmental Conditions**

- Historical and existing project site land uses including a former gas tank and existing inground hydraulic lifts and parts washers, and previously identified TPH-impacted soil on the project site

### **Potential Recognized Environmental Conditions**

- Adjacent automotive repair facilities, former adjacent gasoline service stations and adjacent gas transmission and hazardous liquid pipeline
- Western adjacent railroad tracks

To evaluate the project site impact associated with the historical and current project site land uses, Rincon recommended conducting a soil matrix/soil vapor assessment on the vacant lot on the western portion of the project site (former industrial land uses), in the vicinity of the former gas tank, in the storage yard (previously used for automobile storage), adjacent to the parts washers inside the structures, and of the onsite soil piles.

To evaluate the project site impact associated with former and existing adjacent land uses, including western adjacent railroad tracks, as well as the location of gas transmission and hazardous liquid pipelines adjacent to the project site, Rincon recommended conducting a soil vapor/soil assessment. Soil vapor probes should be located along the perimeter of the project site and in the vicinity of impacted soil onsite. Rincon recommended that soil samples should be collected along the western adjacent property line, closest to the adjacent railroad tracks.

Based on the date of construction of the onsite structure between 1977 and 1987, asbestos and lead-based paint have the potential to be located on the project site. Although not considered a

REC, Rincon noted that renovation or demolition of the onsite structures may require an asbestos and LBP survey, and possibly abatement.

## 2.2 Scope of Work

The following tasks were performed as part of this Phase II ESA:

- **Health and Safety Plan.** A Health and Safety Plan was developed for the Phase II ESA sampling personnel. Rincon’s Health and Safety Plan outlines the measures to be followed to minimize exposure to onsite workers and the public. This document will be prepared prior to the commencement of field work. This document is required by Federal law.
- **Utility Notification.** Prior to the commencement of drilling activities, the project site was pre-marked and Underground Services Alert (USA) utility marking service was contacted to mark areas where underground public utilities might be located in the drilling area. California law requires this notification.
- **Soil and Soil Vapor Sampling.** Soil matrix sampling and soil vapor sampling were conducted at the project site according to the table below:

Area of Concern and Potential REC	Number of Borings	Sample Depths (feet bgs)	Matrix	Analysis
Western portion –former industrial use	3	2, 5, & 10	Soil	3 soil samples - TPH 3 soil samples - VOCs 3 soil samples - metals
Southwestern portion – adjacent railroad tracks	2	1 & 3	Soil	4 soil samples - TPH 4 soil samples – herbicides 4 soil samples - metals
Former gas tank onsite (unknown if this was AST or UST)	1	2, 5, 10 & 15	Soil Soil vapor	4 soil samples - TPH 4 soil samples - VOCs 4 soil samples – metals 1 soil vapor sample- VOCs/methane
Parts washers, stained areas and areas of TPH-impacted soil	5	5	Soil vapor	5 soil vapor samples- VOCs / methane
Hydraulic lifts	4	2, 5 & 10	Soil	12 soil samples - TPH 12 soil samples - PCBs

Area of Concern and Potential REC	Number of Borings	Sample Depths (feet bgs)	Matrix	Analysis
Eastern portion -auto storage areas (former agricultural)	3	2 & 5	Soil	6 soil samples - TPH 6 soil samples - VOCs 6 soil samples – metals 6 soil samples pesticides
Stockpiles	n/a	n/a	Soil	3 soil samples - TPH 3 soil samples - VOCs, 3 soil samples – metals 3 soil samples - pesticides 3 soil samples - PCBs
Adjacent gas stations and pipelines	6	5	Soil vapor	6 soil vapor samples- VOCs/ methane

- **Reporting.** Preparation of this report documenting our findings.

## 3 Geologic and Hydrogeologic Setting

### 3.1 Physical Setting Sources

#### 3.1.1 Topography

The current USGS topographic map (Anaheim Quadrangle, 2012) indicates that the project site is situated at an elevation of about 135 feet above mean sea level with topography sloping down to the southwest.

#### 3.1.2 Geology and Hydrogeology

According to *Soil Contamination Assessment and Remediation Report, Import Auto Supply Facility, 101 N Manchester, Anaheim, California* prepared by Genesis Environmental Corporation and dated November 28, 1994, the following geologic information was provided:

- “The site is located on the Peninsular Range Geomorphic Province of the Los Angeles Basin. The province is composed of northwest-trending low lying hills and mesas with alluvium and associated deposits of Recent of Pleistocene Age. The site is bounded by the Puente Hills to the northeast, the Santa Ana Mountains to the east, and the San Joaquin Hills to the south.”

This property is located adjacent to the south of the project site.

### 3.1.3 Site Geology

According to the 2004 Phase I & II ESA conducted for the project site, the project site is underlain by Holocene alluvial deposits consisting of unconsolidated to poorly consolidated, laterally discontinuous sand and gravel layers with intermittent silt and clay-rich layers.

### 3.1.4 Regional Groundwater Occurrence and Quality

According to the 2012 Phase I ESA, groundwater is encountered approximately 140 feet bgs. In addition, according to the 2004 Phase I ESA, groundwater flow direction beneath the project site is toward the south-southwest.

## 4 Sampling Methodology

---

### 4.1 Soil Matrix Sampling

Under the direction of Rincon, Choice Drilling, advanced 13 borings at the project site (RB1 through RB13) using a limited access track-mounted Geoprobe rig as follows:

- **Hydraulic Lifts.** Four borings (RB1 through RB3, and RB13) were advanced in the vicinity of the hydraulic lifts to a depth of 10 feet below ground surface (bgs). Soil matrix samples were collected at 2, 5 and 10 feet bgs, for a total of 12 soil matrix samples.
- **Former Industrial Use.** Three borings (RB4 through RB6) were advanced in the area of former industrial uses to a depth of 10 feet bgs. Soil matrix samples were collected at 2, 5 and 10 feet bgs, for a total of 9 soil matrix samples.
- **Former Gas Tank.** One boring (RB7) was advanced in the area of the former gas tank to a depth of 15 feet bgs. Soil matrix samples were collected at 2, 5, 10 and 15 feet bgs, for a total of 4 soil matrix samples.
- **Railroad Tracks.** Two borings (RB8 and RB9) were advanced adjacent to the railroad tracks to a depth of 3 feet bgs. Soil matrix samples were collected at 1 and 3 feet bgs, for a total of 4 soil matrix samples.
- **Auto Storage Area.** Three borings (RB10 through RB12) were advanced in the vicinity of the former auto storage area to a depth of 5 feet bgs. Soil matrix samples were collected at 2 and 5 feet bgs in RB10 and RB11. A soil matrix sample was collected from RB12 only at 2 feet bgs, due to refusal encountered by the rig at 2 feet. A total of 5 soil matrix samples were collected from the former auto storage area.
- **Soil Stockpiles.** One soil sample was collected at each of the 3 soil stockpiles identified onsite (SP1, SP2 and SP3).

The Geoprobe hydraulically drives a rod into the ground. When the target soil sampling depth is reached, a soil sampler is attached to the end of the rod. The soil sampler consists of a 1 inch diameter tube equipped with an acetate liner. By advancing this sampler into the soil, soil is forced into the opening of the sampling tube and a sample is obtained. Once the sampler is filled, it is

retrieved and the sample liner is removed. The liner is then covered at each end with Teflon and tight-fitting plastic caps, labeled, and stored in a cooler with ice and transferred under chain of custody documentation to the analytical laboratory. Soil boring Logs are in Appendix A.

The samples were transported under chain-of-custody documentation by courier to BC Laboratories, Inc., a State-certified analytical laboratory in Bakersfield, California. All sampling equipment was decontaminated between uses by washing with Alconox detergent and water. All soil sampling was performed under the oversight of a California Professional Geologist.

## 4.2 Soil Vapor Sampling

Under the direction of Rincon, Optimal Technology advanced 12 borings (SV1 through SV12) on the project site by hydraulically pushing steel probes to a depth of 5 feet bgs. An electric rotary hammer drill was used to drill a 1.0-inch diameter hole through the overlying surface to allow probe placement. At each of the 12 boring locations, an electric vacuum pump was attached to the probe and purged prior to collection of the soil vapor sample. The soil vapor samples were collected in Hamilton gas-tight syringes and immediately injected into the gas chromatograph.

The locations of the soil matrix and soil vapor sampling locations are depicted in Figure 2, Soil Boring and Sampling Location Map. As indicated in Figure 2 and as described above, RB7 and SV7 were collocated.

# 5 Laboratory Analysis

---

Soil samples collected from the project site were analyzed for one or more of the following:

- Total petroleum hydrocarbons (TPH) by EPA method 8015
- Volatile organic compounds (VOCs) by EPA method 8260B
- Total metals by EPA method 6010B and 7471A
- Polychlorinated biphenyls (PCBs) by EPA method 8082
- Organochlorine pesticides (OCPs) by EPA method 8081A
- Chlorinated herbicides by EPA method 8151A

Soil gas samples were analyzed for VOCs and methane by EPA Method 8021B.

## 6 Soil Matrix Sampling Results

---

On August 31, 2017, Choice Drilling, under the supervision of Rincon, advanced 13 soil borings at the project site (RB1 through RB13). One boring location, RB7, was collocated with a soil vapor sampling location, SV7. Soil matrix samples were collected at various depths and were analyzed for a variety of constituents as shown in the table above. Results of the soil matrix analysis are shown in Tables 1 through 4. A copy of the soil matrix analytical report is included in Appendix B. Detected concentrations of constituents in soil were compared to San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Environmental Screening Levels (ESLs).

- **Hydraulic Lifts (RB1 through RB3, and RB13).**

TPH: TPH as gasoline (TPHg) and as diesel (TPHd) were not detected in any of the soil matrix samples collected and analyzed from RB1 through RB3 and RB13. However, with the exception of RB3-5, TPH as motor oil (TPHo) was detected in all of the soil matrix samples analyzed, ranging from 8.1 mg/kg to 2,100 mg/kg. All of the concentrations detected were below the commercial/industrial ESL (140,000 mg/kg) and residential ESL (11,000 mg/kg) for TPHo in shallow soil.

VOCs: Soil matrix samples collected from RB1 were analyzed for VOCs. Tetrachloroethene (PCE) was detected in RB1-2 at a concentration of 0.0017 mg/kg, which is below the commercial/industrial ESL (2.7 mg/kg) and residential ESLs (0.6 mg/kg). No other VOCs were detected in any of the soil matrix samples collected from RB1.

PCBs: Soil matrix samples collected from RB2, RB3 and RB13 were analyzed for PCBs. PCB-1016 and PCB-1260 were detected in RB1-2 at concentrations of 0.026 mg/kg and 0.0919 mg/kg, respectively. In addition, PCB-1260 was detected in RB13-2 at a concentration of 0.026 mg/kg. PCBs were not detected above the commercial/industrial ESL of 1.0 mg/kg or residential ESL of 0.25 mg/kg.

- **Former Industrial Use (RB4 through RB6).**

TPH: TPHg and TPHd were not detected in any of the soil matrix samples collected and analyzed from RB4, RB5 and RB6. However, TPHo was detected in RB4-2, RB5-2 and RB6-2 at concentrations ranging from 70 mg/kg to 880 mg/kg. All of the concentrations detected were below the commercial/industrial ESL (140,000 mg/kg) and residential ESL of 11,000 mg/kg.

VOCs: No VOCs were detected in the soil matrix samples collected and analyzed from RB4, RB5 and RB6.

Metals: Metals were detected in all of the soil samples analyzed. In RB4 and RB5, selenium was detected at concentrations of 1.9 mg/kg and 2.3 mg/kg, respectively, which exceeds its typical background concentration range of 0.015 mg/kg to 0.430 mg/kg. However, the concentrations of selenium do not exceed their residential ESL of 390 mg/kg. None of the other metals concentrations exceeded their typical background range or respective commercial/industrial or residential ESLs.

- **Former Gas Tank (RB7).**

TPH: TPHg was not detected in the soil matrix samples collected and analyzed from RB7. TPHd was detected at a concentration of 2.9 mg/kg in RB7-15, below its commercial industrial ESL of 1,100 mg/kg and residential ESL of 230 mg/kg. TPHo was detected in all four soil matrix samples

analyzed, ranging from 9.7 mg/kg to 520 mg/kg, below its commercial/industrial ESL (140,000 mg/kg) and residential ESL of 11,000 mg/kg.

VOCs: Benzene was detected in 3 of the 4 samples analyzed, ranging from 0.0016 mg/kg to 0.0020 mg/kg. Toluene was also detected in RB7-2 at a concentration of 0.0013 mg/kg. Both constituents were detected below their respective commercial/industrial and residential ESLs.

Metals: Metals were detected in all of the soil samples collected and analyzed from RB7. Although two concentrations of selenium, one concentration of thallium and one concentration of zinc exceeded their respective typical background concentration range, none of the detected concentrations of metals exceeded their respective ESLs.

▪ **Railroad Tracks (RB8 and RB9).**

TPH: TPHg and TPHd were not detected in any of the soil matrix samples collected and analyzed from RB8 and RB9. TPHo was detected in all 4 samples analyzed, ranging from 28 mg/kg to 870 mg/kg, below its commercial /industrial ESL (140,000 mg/kg) and residential ESL of 11,000 mg/kg.

Herbicides: Herbicides were not detected in any of the samples analyzed.

Metals: Metals were detected in all of the soil samples collected and analyzed from RB8 and RB9. Although one concentration of selenium and one concentration of zinc exceeded their respective typical background concentration ranges, they did not exceed their respective ESLs. No other metals. None of the other metals concentrations exceeded their typical background range or respective commercial/industrial or residential ESLs.

▪ **Auto Storage Area (RB10 through RB12).**

TPH: TPHg and TPHd were not detected in the soil matrix samples collected and analyzed from RB10, RB11 or RB12. TPHo was detected in 3 of the 5 samples analyzed, ranging from 8.7 mg/kg to 2,800 mg/kg, below its commercial /industrial ESL (140,000 mg/kg) and residential ESL of 11,000 mg/kg.

VOCs: Benzene was detected in 3 of the 5 samples collected and analyzed from RB10, RB11 or RB12, ranging from 0.0010 mg/kg to 0.0038 mg/kg. Toluene was detected in 2 of the 5 samples collected and analyzed from RB10, RB11 or RB12, ranging from 0.0017 mg/kg to 0.0028 mg/kg. Both constituents were detected below their respective ESLs.

Metals: Metals were detected in all of the soil samples collected and analyzed from RB10 through RB12. Although one concentration of selenium and one concentration of thallium exceeded their respective typical background concentration ranges, they did not exceed their respective ESLs. None of the other metals concentrations exceeded their typical background range or respective commercial/industrial or residential ESLs.

▪ **Soil Stockpiles (SP1, SP2 and SP3).**

TPH: TPHg was not detected in any of the three soil samples collected and analyzed from the onsite soil piles (SP1, SP2 and SP3). TPHd was detected in one of the soil pile samples (SP2) and TPHo was detected in all three soil pile samples; however, the concentrations detected were below the ESLs for both constituents.

VOCs: VOCs were not detected in the soil samples collected and analyzed from the onsite soil piles

PCBs: With the exception of PCB-1260, which was detected at a concentration of 0.0060 mg/kg, no other PCBs were detected in the soil samples collected and analyzed from the onsite soil piles. PCBs were not detected above the commercial/industrial ESL of 1.0 mg/kg or residential ESL of 0.25 mg/kg.

Pesticides: Varying concentrations of DDD, DDE, DDT and dieldrin were detected in the soil samples collected and analyzed from the onsite soil piles. However, none of the concentrations detected exceeded their respective ESLs.

Metals: Metals were detected in all of the soil samples collected and analyzed from the onsite soil piles. Although one concentration of selenium exceeded its typical background concentration range of 0.015 mg/kg to 0.430 mg/kg, it did not exceed its respective ESL of 390 mg/kg. None of the other metals concentrations exceeded their typical background range or respective commercial/industrial or residential ESLs.

## 7 Soil Vapor Sampling Results

---

On August 31, 2017, Optimal Technology, under the supervision of Rincon, advanced 12 soil borings throughout the project site (SV1 through SV12). One soil vapor sample was collected from each boring at 5 feet bgs, with a duplicate sample collected at SV12, for a total of 13 soil vapor samples. The soil vapor samples were analyzed for VOCs and methane using an onsite mobile laboratory. Results of the soil vapor analysis are shown in Table 5. A copy of the soil vapor analytical report is included in Appendix C.

VOCs: According to the laboratory analytical results, trichloroethylene (TCE) was detected in the soil vapor samples collected from SV2 and SV3, at concentrations of 1.09 µg/L and 0.18 µg/L. One concentration detected was above the residential ESL of 0.24 µg/L, but below the commercial/industrial ESL of 3.0 µg/L. No other VOCs were detected in SV2 and SV3. SV2 and SV3 were located inside the auto repair buildings, adjacent to the parts washers. Based on the proposed commercial/ industrial use of the site and the fact that the detected concentrations of TCE do not exceed the commercial/industrial ESL for TCE in soil vapor, no further assessment for TCE in soil vapor is recommended. .

VOCs were not detected in any of the other soil vapor samples analyzed.

Methane: Methane was detected in the soil vapor samples collected from SV1, SV9 and SV10, at concentrations of 162.35 µg/L (247.47 parts per million by volume [ppmv]), 5.45 µg/L (8.31 ppmv), and 6.89 µg/L (10.5 ppmv), respectively. Methane was not detected in any of the other soil vapor samples collected from the project site. According to the Department of Toxic Substances Control (DTSC) Advisory on Methane Assessment and Common Remedies at School Sites dated June 16, 2005 a methane detection of 1,000 ppmv is considered a cautionary value at which a further methane investigation would be recommended. The detected concentrations of methane do not exceed the cautionary value determined by the DTSC.

## 8 Conclusions & Recommendations

---

None of the concentrations of constituents detected in the soil or soil vapor samples exceeded their respective commercial / industrial ESLs.

Methane was detected in three of the soil vapor samples analyzed, ranging from 5.45 µg/L to 162.35 µg/L (8.31 ppmv to 247.47 ppmv). According to the 2005 DTSC Advisory, a methane detection of 1,000 ppmv is considered a cautionary value at which a further methane investigation would be recommended. However, the detected concentrations of methane do not exceed 1,000 ppmv.

Based on the proposed commercial/ industrial use of the site and the fact that the detected concentrations of constituents do not exceed the commercial/industrial screening levels, no further assessment is recommended.

However, based on the previous assessments that were conducted at the project site in 1993 through 2004, hydrocarbon and lead-impacted soil were previously identified at numerous locations at 1512-1520 W Lincoln Avenue. The majority of the impacted soil was identified in the southern portion of the property at 1514 and 1516 W Lincoln Avenue to 10 feet below ground surface. Based on the findings of the previous assessments and the results of the current assessment, we recommend that a soil management plan be prepared that addresses issues associated with the impacted soils that will be encountered during future site excavation/ grading activities. Impacted soils will require special handling and should be removed in accordance with local environmental health regulations and requirements.

## 9 Limitations

---

This report has been prepared for and is intended for the exclusive use of STV and OCTA. The contents of this report should not be relied upon by any other party without the written consent of Rincon Consultants, Inc.

This scope was not intended to completely establish the quantities and distribution of contaminants present at the project site or to determine the cost to remediate the project site. The concentrations of contaminants measured at any given location may not be representative of conditions at other locations. Further, conditions may change at any particular location as a function of time in response to natural conditions, chemical reactions and other events. Conclusions regarding the condition of the project site do not represent a warranty that all areas within the project site are similar to those sampled
