EXECUTIVE SUMMARY

The Orange County Transportation Authority (**OCTA**) is conducting the South Orange County Multimodal Transportation Study (**Study**) to examine a wide range of long-term transportation needs looking at the year 2045 and beyond, including improvements to streets, bus and other transit options, highways, and bikeways. As part of this Study, OCTA is implementing a comprehensive Public Involvement Program (**PIP**). Phase One of the PIP which took place in fall 2020, included an online public webinar, a key stakeholder virtual roundtable and a virtual meeting with south county elected officials. In addition, a survey was conducted which was designed to assess public perception of transportation challenges and improvement strategies in south Orange County. The survey was available September 25 to October 30, 2020 both online as well as through the project information phone line with a live person answering and conducting the survey. The engagement methods to distribute information about the survey included various channels such as emails, postcards mailed specifically to low-income and disadvantaged communities, a communications toolkit sent to cities and stakeholders, and the OCTA Facebook and Twitter accounts.

The survey research was qualitative, which means that results cannot be considered representative of the total population of interest. Informal research methods are useful to explore a group's opinions and views, allowing for the collection of verifiable data. This data can reveal information that may warrant further study and is often a cornerstone for generating new ideas. The survey accomplished the following objectives:

- Solicited public input to include in the study findings report which will include a general analysis of survey results and general comments provided
- Disseminated study information and the online survey to a vast target audience

A total of 360 surveys were collected (351 English, 8 Spanish, 1 Mandarin). The information phone line number was listed on all survey distribution materials; however, no responses were collected through the information phone line.

Key Findings

The survey respondents identified various opportunities to improve future transportation and mobility challenges within south Orange County. From the 350+ people surveyed – who reflect a wide range of demographics and preferences – a majority would like to see:

- Reduction in traffic congestion,
- Increased frequency and accessibility of multimodal transportation, and
- Increased safety and efficiency for all modes of travel.

The summary below displays the top-ranked results related to transportation preferences, perceived challenges, and opportunities for improvement. Respondents had the ability to select up to two or three responses depending on the question.

Survey Overview

Survey Format

The survey was offered in English, Spanish, Mandarin, Korean, and Vietnamese to accommodate the south Orange County population demographics. An online survey was created using SurveyMonkey to provide a streamlined outlet to collect public input and feedback. The survey was also offered through the project information telephone line with a live operator to conduct the survey verbally, making the survey accessible to a wider range of people. The operator was available to provide the survey in English and Spanish, and for the Vietnamese, Korean and Mandarin surveys, the operator would return the stakeholder's call. The survey had a total of 17 questions that focused on the respondent's geographic location, mobility use, transportation and mobility concerns and challenges, and useful strategies to address these challenges. The survey provided respondents the ability to select up to two or three responses depending on the question. Several questions also gave respondents the option to choose "other" and individually submit an answer not already provided. The survey concluded with optional demographic questions related to age, ethnicity, and a sign-up to receive project updates.

Survey Outreach

To reach the south Orange County community at large, multiple outlets were utilized to disseminate the survey. The engagement methods included online tools, mailed postcards, communication toolkits distributed to cities and stakeholders within the project area and social media. Reference Appendix C for the outreach efforts. Through the various methods of outreach, the online survey was successfully distributed to a wide target audience which provided a good foundation for an analysis of the results. Reference Table 2 for a summary of the distribution channels.

SURVEY RESULTS ANALYSIS

The survey results were analyzed based on the 360 responses collected from the 17-question survey.

Geographic Distribution

Multiple engagement methods were utilized to promote full participation within the project area. The majority of the survey respondents indicated they both lived and worked within south Orange County.

Home Zip Code

Out of the 360 surveys collected, 99% of the respondents shared their home zip code (357) and 81% of those respondents shared they live within the project area as shown in Figure 1. 13% of the respondents indicated their home zip code was outside of the project area but still within Orange County, the majority being east of the project area, with some respondents immediately adjacent to the project area. There was a higher concentration of survey participants in Newport Beach, Lake Forest, Mission Viejo, Laguna Niguel, Laguna Woods, and San Clemente. This can vary for numerous reasons such as more noticing reached these respondents through the city's distribution channels, the targeted Facebook ads, etc. Although the responses are concentrated more in some areas than others, the responses collected are spread throughout the entire project area.

Figure 1: Survey Respondents - Home Zip Code

Work Zip Code

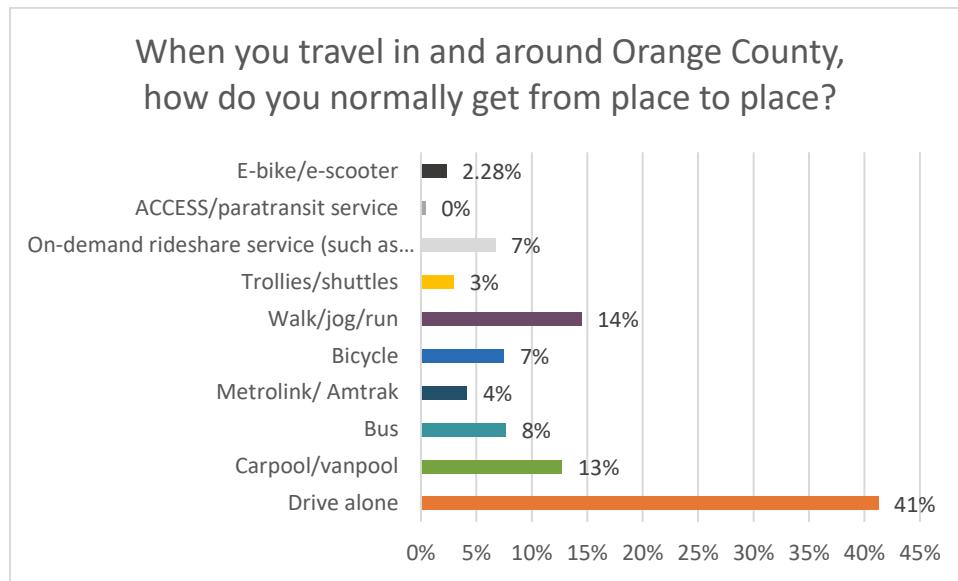

75% of the survey respondents (267) indicated their work zip code and from these respondents, 74% indicated their work zip code is within the project area. There was a higher concentration of survey participants in Lake Forest, Mission Viejo, and San Clemente. Although the responses are concentrated more in some areas than others, the responses collected are more evenly distributed throughout the entire project area slightly more than the home zip codes.

CONCLUSION

The collected survey results offered insight that showed respondents recognize the need to address transportation challenges and want to see an increase in alternative transportation frequency and accessibility, a reduction in traffic congestion, and overall safer conditions for all modes of travel. Analysis of the South Orange County Multimodal Transportation Study, along with strategic planning, will help address the various challenges of transportation accessibility while providing mobility opportunities to relieve transportation congestion and acclimating to the county's rising population. During Phase 2 of the PIP, OCTA will be presenting draft multimodal alternatives to the public for review and input. The feedback collected during Phase 2 combined with the public input collected during Phase 1 will provide OCTA a solid foundation to develop recommendations to address future south Orange County's mobility needs.

Also, expand neighborhood "leisure" public transportation in more communities (e.g. trollies in Laguna, Dana Point, San Clemente could be expanded to Laguna Niguel, Mission Viejo, Aliso Viejo, etc.). Land use planning that puts more jobs within walking distance of Metrolink stations.

20	Oct 20 2020 11:59 AM	South, there is no other reasonable option to manage congestion, it is a shame folks from South County do not realize that. If there is an emergency, I-5 is the only lifeline, pretty shortsighted to not include Foothill south in every conceivable alternative if a real solution is desired. Carpools, vanpools and ridesharing have proven since the 1970s to not be a solution to manage congestion. Hanging your hat on autonomous vehicles would be very shortsighted, only a small proportion of vehicles by your horizon year would be autonomous. Fixing chokepoints and ramps is a bandaid that is not a true solution, sure those are helpful, but
21	Oct 20 2020 11:00 AM	Increased frequencies of trains and buses.

		is not a real option, sure some people ride metrolink but does someone really think transit in south county is the solution to anything? This is very shortsighted. Based on the last 100 years, it should be clear that land-use planning is market based and to think it will change is folly. This county is auto dependent and always will be, you cannot change the mindset of a vast majority of the population so why try? People that travel in south county that are impacted by congestion do not care about walkability or complete streets, if you get on the freeway, active modes are not an option for your trip to begin with, not hard to figure out.

SOUTH ORANGE COUNTY MULTIMODAL TRANSPORTATION STUDY

Overview

Over the next 25 years, the population in south Orange County is anticipated to grow by 16 percent (about 170,000 residents), and employment is expected to grow by 18 percent (about 130,000 jobs). This growth will result in more people traveling throughout south Orange County and more time lost in traffic if we don't plan ahead. Therefore, the Orange County Transportation Authority (OCTA) is conducting a strategic transportation study that will consider transportation needs of residents, commuters, and visitors to the area.

Through collaboration with local stakeholders, the South Orange County Multimodal Transportation Study (SOCMTS) will identify a broad range of improvement recommendations for all modes of transportation, including streets, transit, freeways and bikeways. The study will address south Orange County's mobility needs beyond the year 2045.

OCTA SOCMTS Community Meeting 10/06/20

Study objectives

- Work collaboratively with stakeholders
- Leverage all modes of transportation
- Address long-term mobility needs
- Develop consensus on a set of transportation improvements across all modes

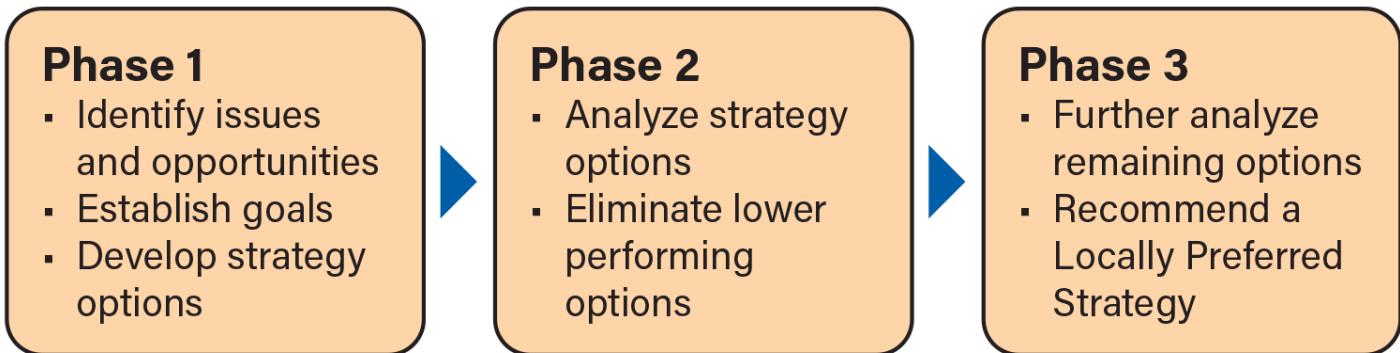

Study area

The Study area covers about 40 percent of the County from State Route 55 to the San Diego County line and from the coast to the foothills.

Project Status

The study is to be completed in late 2021 and the public and key stakeholders will be involved throughout the study process.

Study Phases:

If you have any questions or would like to share a comment about the study, email Community Relations Officer Marissa Espino(<mailto:mespino@octa.net>) or call the survey hotline at 833-711-8070.

OCTA Welcoming Input on South Orange County Transportation Study

Study will examine potential improvements to streets, highways, transit and bikeways for next 25 years as transportation evolves and population and job growth continues

ORANGE – The Orange County Transportation Authority is launching a strategic transportation study to address south Orange County's transportation needs as the area continues to grow with new residents and jobs and as travel patterns and needs evolve.

The study, called the South Orange County Multimodal Transportation Study (SOCMTS), will examine a wide range of transportation needs over the next 25 years, including improvements to streets, bus and other transit options, highways and bikeways.

The area covered by the study encompasses about 40 percent of Orange County, generally south of State Route 55 to the San Diego County line, and from the coast to the foothills.

A virtual public meeting is planned from 5:30 to 6:30 p.m. on Tuesday, Oct. 6.
Information about accessing the meeting online or by telephone is available at www.octa.net/SouthOCStudy.

A recording of the virtual meeting also will be available at that website following the meeting.

OCTA also welcomes comments through an [online survey](#) to hear from those who live, work and visit south Orange County. The brief 12-question survey, with a few additional optional questions, is available online in English, Spanish, Mandarin, Korean and Vietnamese.

“Developing solutions to meet the long-term transportation needs of South County can only succeed if we build community consensus for projects and that’s why early input and opinions are tremendously important,” said OCTA Chairman Steve Jones, also the mayor of Garden Grove. “We look forward to hearing your ideas to help shape the future of South County.”

A link to the survey can be found at www.octa.net/SouthOCStudy or can be completed by calling toll-free to (833) 711-8070.

OCTA, which is Orange County's transportation planning agency, is responsible for providing a balanced and sustainable transportation system for the entire county. The focus

on south Orange County is necessary because over the next 25 years, projections show population growing by 170,000 residents and an additional 130,000 jobs are expected.

At the same time, travel patterns and transportation needs have continued to evolve since OCTA's last major transportation study of the area in 2008. The projects from that study have resulted in a more than \$1.5 billion investment in the area, including the I-5 carpool lane project between San Juan Creek Road and Avenida Pico, and the I-5 widening between SR-73 and El Toro Road now under construction.

Since the 2008 study, other significant changes have occurred, including the elimination of the SR-241 Toll Road extension in favor of a non-tolled extension of Los Patrones Parkway, a decline in traditional transit ridership, the introduction of mobile transportation apps and on-demand services such as Uber and Lyft, as well as the introduction of community transit options like shuttles and trolleys.

The South County study will continue in phases through the end of 2021 and residents, business owners and other key stakeholders will be asked to participate throughout.

#

About OCTA: The Orange County Transportation Authority is the county transportation planning commission, responsible for funding and implementing transit and capital projects for a balanced and sustainable transportation system that reflects the diverse travel needs of the county's 34 cities and 3.2 million residents.
