

State Route 91 Corridor Plans

Over the last decade, nearly \$2 billion in transportation improvements have been invested in the State Route 91 corridor between State Route 55 and Interstate 15. These improvements include the completion of 18 miles of Express Lanes between Orange and Riverside counties, new general-purpose travel lanes in each direction along most of the corridor, major interchange upgrades, and bus/rail service and station enhancements. Future improvements along the corridor must be sequenced to ensure each project maximizes the overall benefit to drivers along the State Route 91 corridor. Recommendations are presented to continue these efforts, focusing on improvements for State Route 91 general-purpose lane drivers to accommodate future tolled projects.
