Employment and Travel Follow-Up Survey Results

In an effort to gain an understanding of the impacts of the coronavirus on employment and travel in Orange County, a scientific, statistically valid survey was conducted during the month of July 2020, which served as a baseline to assess patterns at that stage of the pandemic. A subsequent follow-up survey was conducted in September 2021 to assess current employment and travel to see how the commute or remote work patterns may have shifted during the past year.
