550 S Main St.
Orange, CA 92863

**RE: MASTER PLAN OF ARTERIAL HIGHWAYS (MPAH) AMENDMENT REQUEST
– MERRIMAC WAY, CITY OF COSTA MESA, FOCUSED TRAFFIC STUDY**

Dear Mr. Nord:

On February 1, 2024, the City submitted a traffic monitoring report for Merrimac Way pursuant to your letter dated December 6, 2023. Per the original letter agreement with OCTA dated February 2020, the City is responsible for monitoring and evaluating traffic conditions on Merrimac Way every three years until the MPAH is amended to reflect the configuration of a two lane, divided facility with Class II and Class IV bicycle lanes. This letter serves as the City's official request for an MPAH Amendment for Merrimac Way within the City of Costa Mesa to change its Primary Collector classification.

Per the MPAH guidelines, a traffic study was prepared for Merrimac Way. The traffic study is attached as **Appendix A** and was prepared using new traffic counts taken in February 2024 to account for school traffic. The study shows that Merrimac Way is anticipated to operate at an acceptable level of service for both current year 2024 and future year 2050. If OCTA concurs and the amendment is approved, the City will adjust the classification of Merrimac Way during the next update of the City's General Plan Circulation Element.

If you have any questions or require further clarification, please contact me at (714) 754-5343.

Respectfully,

Raja Sethuraman
Public Works Director

c Ramin Nikoui, Senior Engineer
Brett Atencio Thomas, Active Transportation Coordinator
Ivy Hang, Senior Transportation Analyst, OCTA

RE: Proposed Amendment to OCTA MPAH – Merrimac Way

Dear Nikoui,

Pursuant to City of Costa Mesa's request, AGA Engineers has conducted a focused traffic study to evaluate potential traffic impacts along Merrimac Way resulting from the proposed amendment to the Orange County Master Plan of Arterial Highways (MPAH) to reduce the number of lanes. Between Harbor Boulevard and Fairview Road, Merrimac Way has been reduced from four lanes with a raised median to two lanes with a raised median and Class II and Class IV bike lanes.

This traffic analysis is to assess the reduction of lanes on Merrimac way and if it will have a significant impact on the traffic conditions.

Should you have any questions regarding this study, please do not hesitate to contact Greg Wong or Vanessa Pedroza at (714) 992-4592.

Respectfully submitted,

AGA ENGINEERS, INC.

Project Objective and Purpose

The purpose of this study is to evaluate the proposed change in roadway classification of Merrimac Way between Harbor Boulevard and Fairview Road from a Four-Lane Primary Arterial to a Two-Lane Collector Arterial, and to determine any impacts due to the proposed modification. The City of Costa Mesa will be requesting the Master Plan of Arterial Highway (MPAH) Amendment with the Orange County Transportation Authority (OCTA) for the proposed modification.

Project Study Area

Typically, an MPAH Amendment is conducted prior to the change of a roadway to determine if there would be any impacts from the proposed change. For the purposes of this MPAH report, it was assumed that the proposed change has not taken place. Therefore, the “current configuration” was evaluated as the Four-Lane configuration, and the “proposed configuration” was evaluated as the Two-Lane configuration.

Merrimac Way is a Four-Lane Arterial between Harbor Boulevard and Fairview Road with a raised median, located south of Orange Coast College, and is classified as a Primary Arterial. With the proposed lane modifications, the arterial is proposed to be classified as a Two-Lane Divided Collector Arterial with Class II and Class IV bike lanes. The study segment on Merrimac Way between Harbor Boulevard and Fairview Road were analyzed. A total of two intersections were analyzed in this study area, Harbor Boulevard/Merrimac Way and Fairview Road/Merrimac Way, both of which are signalized intersections controlled by the City of Costa Mesa. A project vicinity map is shown on **Figure 1A** and the study area is identified on **Figure 1B** and listed below. While lane modifications are to be applied on Merrimac Way, the curb-to-curb street width will remain unchanged. At the intersection of Harbor Boulevard/Merrimac Way, the lane configuration changes for the westbound approach, from having the middle lane as a shared through/right turn lane to a through only lane. There are no proposed changes to the intersection of Fairview Road/Merrimac Way.

Figure 1B. Study Area

Level of Service (LOS) Analysis and Methodology

Arterial LOS Analysis

For arterial Level of Service (LOS) analysis, OCTA utilizes LOS C for acceptable LOS. For the current configuration of the Four-Lane divided Primary Arterial, the arterial capacity for LOS C is 30,000 (vpd). For the proposed configuration of the Two-Lane Divided Collector Arterial, the arterial capacity for LOS C is 15,000 (vpd). If the existing or future traffic volumes on Merrimac Way exceed LOS C capacity for the proposed configuration, then the current configuration of four lanes divided roadway should

remain on Merrimac Way. The Arterial Highway Master Plan of Arterial Highways (MPAH) capacity values are shown below on **Table 1**.

Table 1. Arterial Highway MPAH Capacity Values

Configuration	Type of Arterial	Level of Service				
		A	B	C	D	E
Current	Four-lane divided	22,500	26,300	30,000	33,800	37,500
Proposed	Two-lane divided	9,000	12,000	15,000	20,000	22,000

Intersection LOS Analysis

The intersection LOS analysis for the two study intersections was determined using the Intersection Capacity Utilization (ICU) Methodology per the Orange County Transportation Authority Congestion Management Program (OCTA CMP) guidelines. The ICU methodology is a simple demand-over-capacity assessment of key intersection movements. This methodology assigns LOS rankings from LOS A to LOS F based on the ratio of vehicles utilizing the intersection to the overall intersection capacity, which is also known as the volume-to-capacity (V/C) ratio (see **Table 2**). The saturation flow rate, or lane capacity, is 1700 vehicles per hour per lane and used for the left, through and right turn lanes. This rate was derived from historical research performed on intersections in Orange County, during peak periods.

Table 2. Level-of-Service by Capacity

Volume/Capacity Ratio (V/C)	LOS
0.00 to 0.60	A
0.61 to 0.70	B
0.71 to 0.80	C
0.81 to 0.90	D
0.91 to 1.00	E
Greater than 1.00	F

Intersection Significant Impact Criteria

Per the OCTA guidelines, traffic impacts for a given intersection are identified as significant if the proposed project results in a downgrade of LOS from an acceptable LOS D (or better) to LOS E/F, or a downgrade from LOS E “without project” to LOS F “with project”. Additionally, for an intersection that already operates at LOS E/F “without project”, a change in ICU value of 0.01 or more will result in a significant impact for that intersection.

Study Scenarios

LOS analyses were conducted for the following Project Year 2024 and Project Year 2050 scenarios for both the arterial LOS and intersection LOS as shown below:

- Year 2024
 - Current Configuration – Four-Lane, Divided Primary Arterial
 - Proposed Configuration – Two-Lane, Divided Collector Arterial
- Year 2050
 - Current Configuration – Four-Lane, Divided Primary Arterial
 - Proposed Configuration – Two-Lane, Divided Collector Arterial

Lane configurations for Harbor Boulevard and Fairview Road are shown on **Figures 2A** and **2B** for existing conditions and **Figures 3A** and **3B** for proposed conditions.

Year 2024 LOS Analysis

Arterial LOS Analysis

Weekday 24-hour traffic counts were taken in order to assess the LOS for Merrimac Way for both configurations. The traffic counts were taken on Merrimac Way on Thursday February 15, 2024 between Harbor Boulevard and Fairview Road and showed a total of 6,514 vehicles per day (see **Table 3**), which is well under the arterial LOS C capacity. The analysis show that Merrimac Way operates at a LOS A for both a Four-Lane Divided Primary Arterial and a Two-Lane Divided Collector Arterial. Detailed 24-hour traffic counts are included in **Attachments A**.

Table 3. Average Daily Traffic on Merrimac Way for Year 2024

Year	ADT for Merrimac Way (vpd)	MPAH Arterial LOS A Capacity (vpd)		LOS for Merrimac Way
		Current Configuration for Primary Divided Arterial (four-lanes)	Proposed Configuration for Divided Collector Arterial (two-lanes)	
2024	6,514	22,500	9,000	A

Intersection LOS Analysis

Lane configurations for Harbor Boulevard at Merrimac Way and Fairview Road at Merrimac Way are shown on **Figures 2A** and **2B** for existing conditions and **Figures 3A** and **3B** for proposed conditions.

The lane configuration change for Harbor Boulevard/Merrimac Way from existing to proposed is only for the westbound approach, where the shared through and right turn lane will be striped as a through lane only. The lane configuration change for Fairview Road/Merrimac Way from existing to proposed is only for the eastbound approach, where a bike lane is implemented.

Figure 2A. Existing Lane Configuration on Harbor Boulevard/Merrimac Way

Figure 2B. Existing Lane Configuration on Fairview Road/Merrimac Way

Figure 3A. Proposed Lane Configuration on Harbor Boulevard/Merrimac Way

Figure 3B. Proposed Lane Configuration on Fairview Road/Merrimac Way

For the intersection LOS analysis, peak period turning movement counts were taken on Thursday February 15, 2024. The AM and PM peak hour traffic volumes are shown in **Figures 4A and 4B**, respectively. Detailed peak hour turning movement counts are included in **Attachment B**. For low vehicle volumes a minimum of 10 vehicles per hour was used.

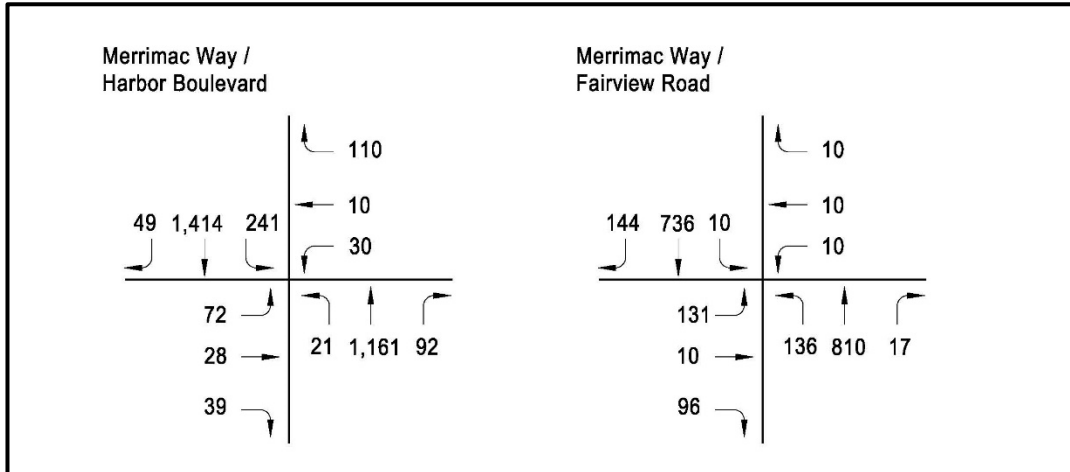

Figure 4A. Year 2024 AM Peak Hour Turning Movement Counts

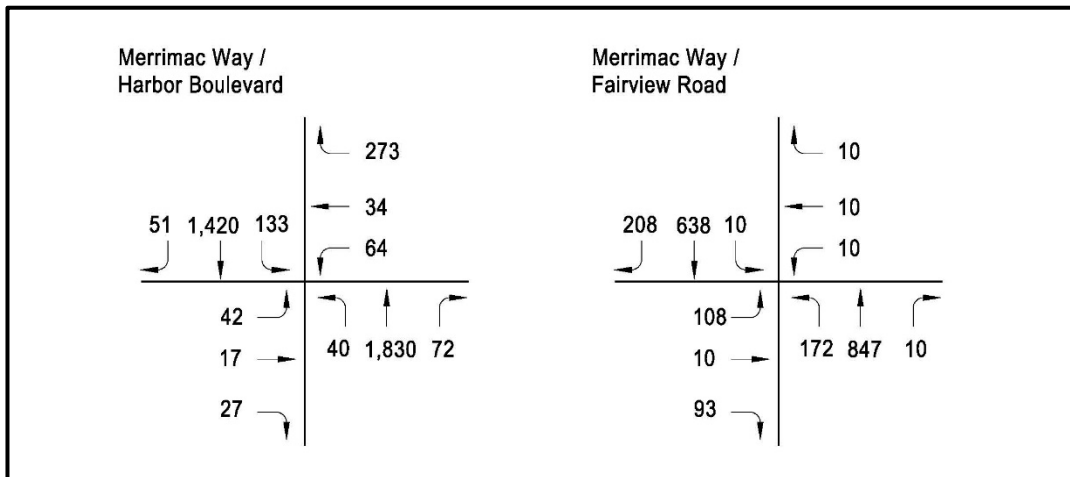

Figure 4B. Year 2024 PM Peak Hour Turning Movement Counts

For this Current Configuration scenario, Fairview Road/Merrimac Way operates at a LOS A for both peak hours, while Harbor Boulevard/Merrimac Way operates at LOS A for both peak hours as well. For Proposed Configuration scenario, the LOS remained the same as the current configuration for

both intersections. Intersection LOS analysis for the current configuration and proposed configuration scenarios are summarized in **Table 4**. The intersection LOS analysis ICU worksheets are provided in **Attachment C**.

Table 4. Intersection Level of Service Analysis for Year 2024

	No.	Location	Year 2024			
			AM Peak Hour		PM Peak Hour	
			ICU	LOS	ICU	LOS
Current Configuration	1	Merrimac Way/Harbor Boulevard	0.42	A	0.56	A
	2	Merrimac Way/Fairview Road	0.29	A	0.28	A
Proposed Configuration	1	Merrimac Way/Harbor Boulevard	0.42	A	0.61	B
	2	Merrimac Way/Fairview Road	0.29	A	0.28	A

Year 2050 LOS Analysis

Data from the Orange County Transportation Analysis Model (OCTAM) was utilized to determine the projected future growth rate from Base Year 2019 to Future Year 2050. Based on the data (see **Attachment D**), there was no significant increase except for northbound approach in the AM peak hour and the southbound approach in the PM peak hour for Harbor Boulevard, with a growth of 32% and 14%, respectively. All other movements had a 5% growth or less. Therefore, the projected growth provided by OCTAM was used only for the AM northbound approach and PM southbound approach, at Harbor Boulevard. In order to account for other ambient growth in the study area and for a conservative analysis, a 10% increase was used for all other approaches. For the northbound approach at Harbor Boulevard, during the AM peak hour, extrapolating the growth of 32% from Year 2019 to Year 2050 equates to approximately 1% growth, per year. Therefore, from Year 2024 to Year 2050, the northbound approach is expected to have a growth rate total of 26%. For the southbound approach at Harbor Boulevard, during the PM peak hour, extrapolating the growth of 14% from Year 2019 to Year 2050 equates to approximately 0.5% growth per year. Therefore, from Year 2024 to Year 2050, the southbound approach is expected to have a growth rate total of 13%. The growth rates are summarized below.

- OCTAM Year 2019 – Year 2050, Weekday AM Peak Period Growth
 - o Harbor Boulevard, Northbound – 32% growth, Equates to approximately 1% per year
 - Year 2024 to Year 2050 = 26% total growth
- OCTAM Year 2019 – Year 2050, Weekday PM Peak Period Growth

- Harbor Boulevard, Southbound – 14% growth, Equates to approximately 0.5% per year
 - Year 2024 to Year 2050 = 13% total growth
- All other movements, 10% total growth

Arterial LOS Analysis

Year 2050 traffic reflects the 2024 traffic volumes plus a projected growth rate for the daily traffic. The projected 10% growth was applied to the 2024 daily traffic volumes on Merrimac Way to develop Year 2050 traffic volumes. The traffic volumes increased to 7,166 vehicles per day for the Year 2050 using the 10% growth as shown in **Table 5**. Based on the projected 2050 traffic volumes on Merrimac Way, the arterial is expected to continue to operate at LOS A under both the Four-Lane Divided Primary Arterial and the Two-Lane Divided Collector Arterial scenarios.

Table 5. Average Daily Traffic on Merrimac Way for Year 2050

Count Year	10% Growth ADT for Merrimac Way (vpd)	MPAH Arterial LOS A Capacity (vpd)		LOS for Merrimac Way
		Current Configuration for Primary Divided Arterial (four-lanes)	Proposed Configuration for Divided Collector Arterial (two-lanes)	
2024	7,166	22,500	9,000	A

Intersection LOS Analysis

The growth rates were applied to the 2024 turning movement counts to develop the 2050 intersection traffic volumes. The 10% growth rate was applied to all movements except for the AM northbound and PM southbound at Harbor Boulevard. These movements were increased by 26% for the AM peak hour and 13% for the PM peak hour. Year 2050 for AM and PM peak hour turning movement traffic volumes are shown in **Figures 5A and 5B**, respectively.

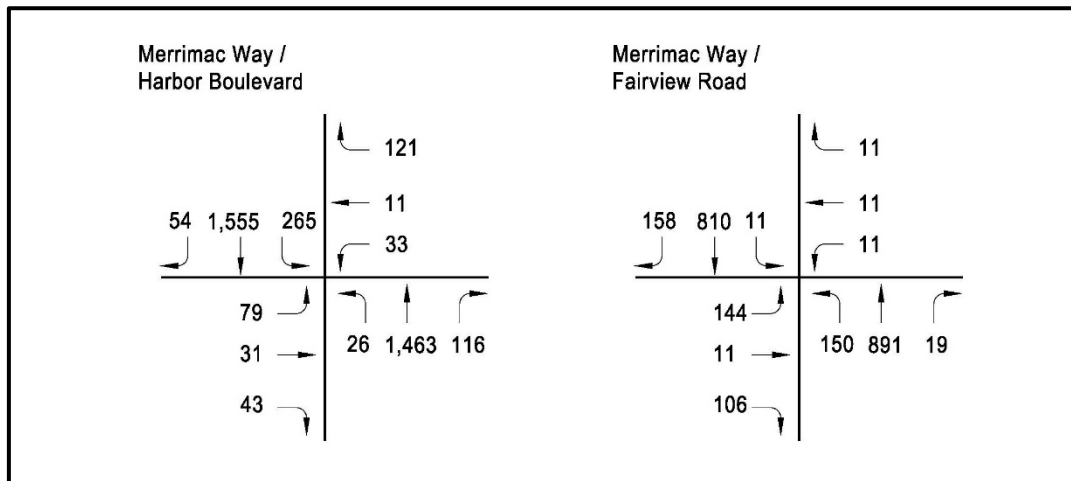

Figure 5A: Year 2050 AM Peak Hour Turning Movement Counts

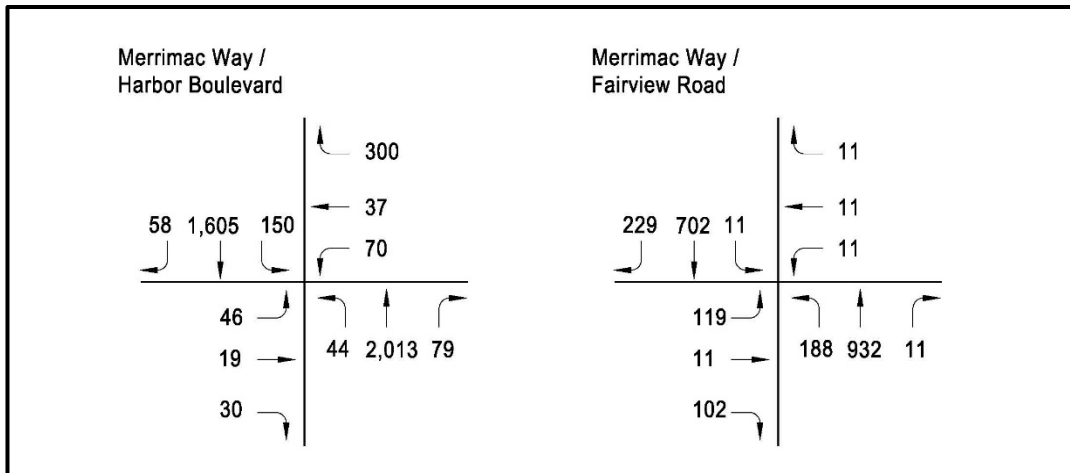

Figure 5B: Year 2050 PM Peak Hour Turning Movement Counts

For the Current Configuration scenario, Harbor Boulevard/Merrimac Way intersection is expected to operate at a LOS A for the AM peak hour and LOS B for the PM peak hour. The Fairview Road/Merrimac Way intersection is expected to operate at a LOS A for both the AM peak hour and the PM peak hour. For Proposed Configuration scenario, the LOS for both intersections remain the same as the current configuration. Intersection LOS analysis for the current configuration and proposed configuration Year 2050 scenarios are summarized in **Table 6**, and intersection LOS analysis worksheets are provided in **Attachment E**.

Table 6. Intersection Level of Service Analysis for Year 2050

	No.	Location	Year 2050			
			AM Peak Hour		PM Peak Hour	
			ICU	LOS	ICU	LOS
Current Configuration	1	Merrimac Way/Harbor Boulevard	0.50	A	0.61	B
	2	Merrimac Way/Fairview Road	0.32	A	0.30	A
Proposed Configuration	1	Merrimac Way/Harbor Boulevard	0.50	A	0.66	B
	2	Merrimac Way/Fairview Road	0.32	A	0.30	A

Conclusion

This traffic study evaluated Merrimac Way between Harbor Boulevard and Fairview Road from a Four-Lane Primary Arterial to a Two-Lane Collector Arterial and to determine any impacts due to the proposed modification.

After analyzing the current conditions for Merrimac Way between Harbor Boulevard and Fairview Road for Year 2024, the proposed configuration of two-lanes and with Class II and Class IV bike lanes will have no significant impact on traffic conditions. The arterial LOS analysis for Merrimac Way, showed a LOS A for the current and proposed configurations. Intersection LOS was conducted for two intersections on Merrimac Way at Harbor Boulevard and at Fairview Road. The intersection LOS analysis determined that both intersections will operate at an acceptable LOS B or better with the proposed configuration. Using the OCTAM model for the Year 2050 analysis, growth rates were determined and applied to the 2024 traffic volumes to develop 2050 traffic conditions. The roadway segment LOS analysis conducted for Year 2050, determined that Merrimac Way is expected to operate at LOS A for the current and proposed configurations. The intersection LOS analysis for Year 2050, determined that neither of the two intersections on Merrimac Way – at Harbor Boulevard and at Fairview Road will be significantly impacted by the proposed configuration. Both study intersections are expected to operate at an acceptable LOS B or better with the proposed configuration.

Merrimac Way, between Harbor Boulevard and Fairview Road, and the intersections of Harbor Boulevard/Merrimac Way and Fairview Road/Merrimac Way, are expected to operate at an acceptable LOS for the proposed configuration for both Current Year 2024 and Future Year 2050. Therefore, it is recommended to reclassify Merrimac Way from a Four-Lane Divided Primary Arterial to a Two-Lane Divided Collector Arterial.
